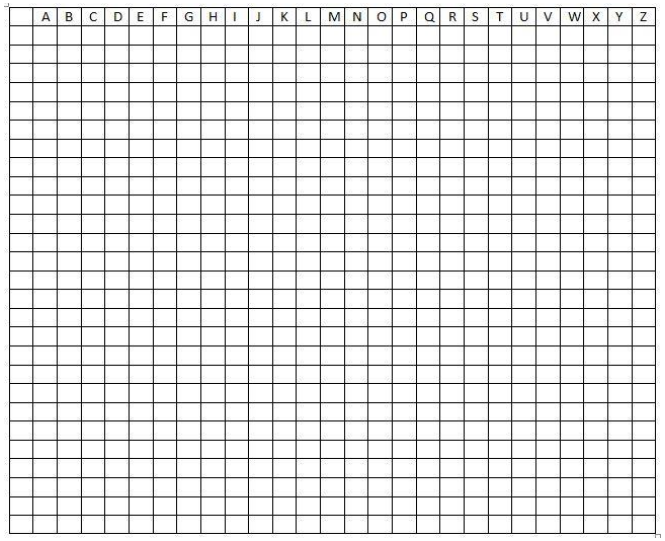
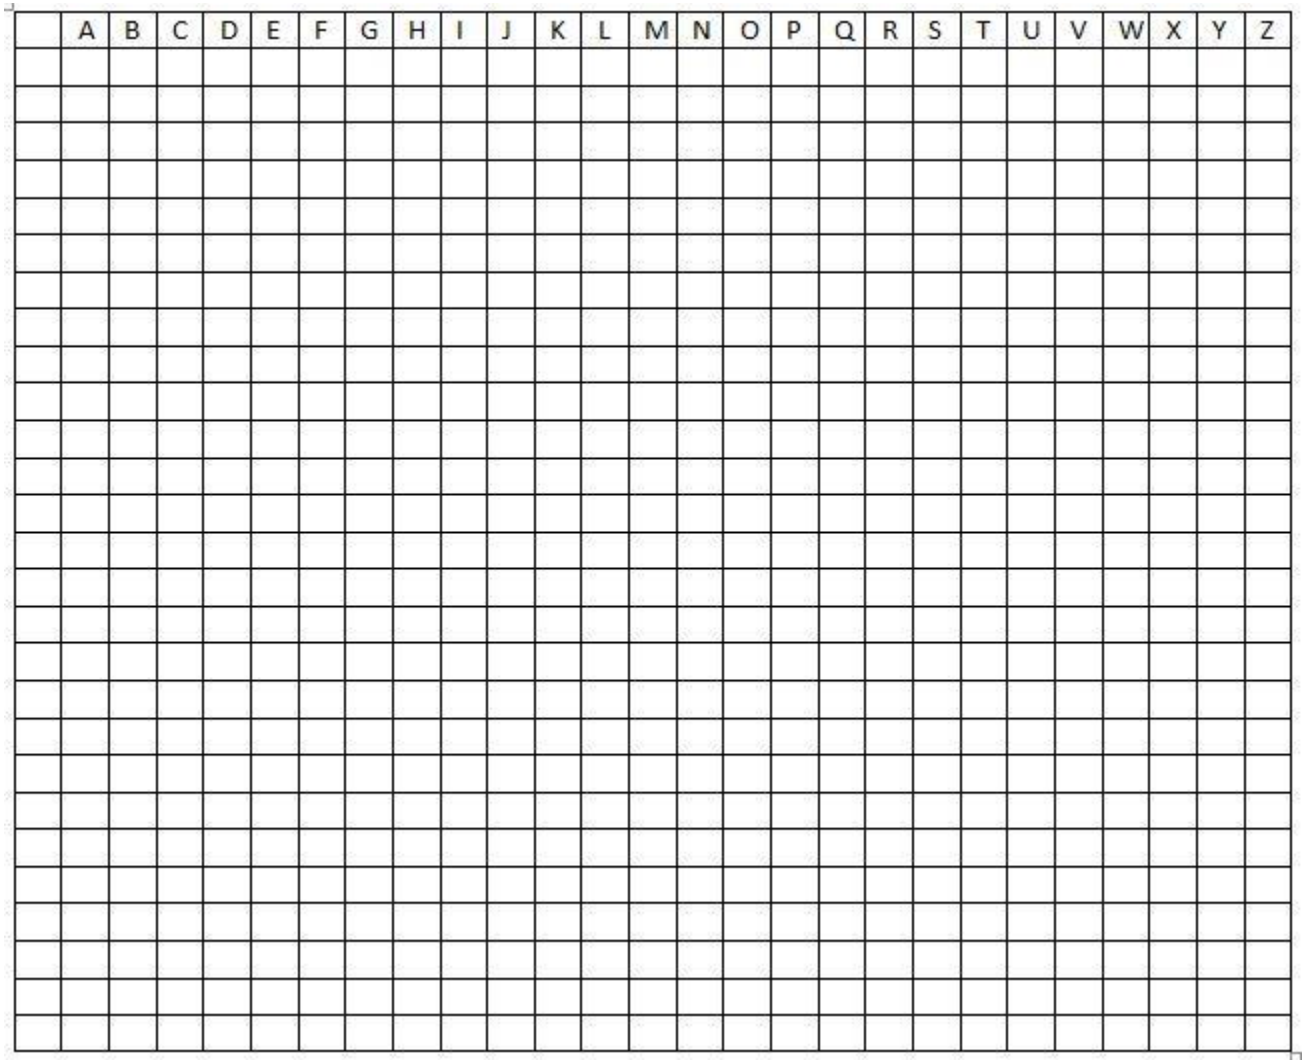
WHAT DOES YOUR NAME LOOK LIKE AS A CONSTELLATION

DIRECTIONS:




1. Write your name vertically down the Y axis. (Skip a space between each letter of the name will spread the picture out better.)
2. Start with the first letter in the written name. Follow along the row to the X axis until you come to the column with that letter of the alphabet and draw a star in that square (see the example). Continue with the other letters.
3. Look at the stars and find a pattern. The paper may be held in any orientation, and one of several constellations could be created.
4. "Connect-the-dots" and draw a picture of your constellation.
